**Subject:** Navy Takes Down Sample Results  
**Date:** Friday, November 22, 2019 12:13:13 PM

---

The Navy removed the water test results for discharges Clover Valley Creek and Dugall Bay from its website - just as the public and environmental agencies are becoming aware of the pollution.

THE EXCUSE: Yesterday the Navy said it was re-organizing its website. (However other information had not been removed.). Today the Navy said it's website was experiencing "technical difficulties."

**Contact the Navy reps above. Tell them to put the monthly sample results back where people can see—and release the results of testing done in May and August of 2018. We still don't know what they found.**

I downloaded the Navy's monthly reports before they were taken down. Here's some of what has been going to Clover Valley Creek and Dugall Bay.

From Twelve Navy Monthly Samples (parts per trillion)

Average Total PFAS: 209.59

Highest Month Total: PFAS 266.7

Avg Combined PFOA/PFOS: 111.37 (EPA drinking water limit is 70)

Highest Month Combined PFOA/PFOS: 171.7

Avg PFHxS 58.35

Highest Month PFHxS 90.8
